

ACOUSTIC LINE

Tailor made
innovative
designs...

There has been little guidance in the past on how to achieve the right balance of acoustics in the school environment. This has been addressed through building Bulletin 93 which gives architects, specifiers & suppliers a framework for their acoustic design.

To assist our customers in conforming to this regulation, Waivis can offer the patented Acoustic Line shutter from REHAU. This sound absorbing tambour door works in conjunction with traditional methods of acoustic conditioning such as ceiling panels & wall cladding.

The Acoustic Line product has been fully tested and evaluated as a class B sound absorber (EN ISO 11654). The graph below shows the Acoustic Line product to have a sound absorbing coefficient of 0.8 (ISO 354).

Aside from its sound absorbing properties, the Acoustic Line shutter has all the same benefits in terms of space saving, durability and design as all of Waivis' side opening shutters.
