

### ALUMINIUM & STEEL

### Tailor made innovative designs...

Waivis have a range of customers using and supplying their shutters into the retail sector. Their success in this market is down to several factors, but mainly the versatility offered by the shutter systems.

Aluminium and steel shutters in particular offer many benefits to retailers. They are robust and lockable, offering added security to protect expensive products e.g. cigarettes, cosmetics & pharmaceuticals. The shutters themselves can be used as promotional tools. Anodised, powder coated or screen printing is available, and can be tailored to compliment or promote the products contained inside.

Shutters also have the advantage in terms of space saving, particularly behind narrow kiosks, and in aisles used by customers.

Forthcoming UK legislation regarding tobacco displays means that shutters are more relevant now than ever as shutters can be easily pulled down to conceal contents.

Waivis have a range of mechanisms for both vertical and side opening aluminium and steel shutters including all required tracks, handles and locks.
